Summary

Software Development Engineer with 2+ years of experience building **Android and full-stack applications** using Java, React, and Ruby on Rails. Hands-on experience in **AI agent-driven product development**, performance optimization, and native Android integration, with a focus on delivering reliable, production-ready solutions.

Skills

Languages: Java · JavaScript · Ruby · Kotlin · C/C++ · Python

Technologies & Framework: React · Rails · Android · MySQL · AWS (ECR, SageMaker) · Firebase · Capacitor · Docker · ARCore · CI/CD (Git, Jenkins) · MixPanel

Work Experience

Software Development Engineer - Full Stack June 2024 - August 2026

Vegrow *Chennai, TN*

- Led a **4-member team** to deliver a native Android application from scratch, partnering with the Product team to translate requirements into a plan and ship within the expected timeline.
- Improved on-device video processing by **40%** by introducing **concurrency and worker-based video processing** in the Android pipeline, improving overall processing efficiency.
- Reduced page load time from **12 seconds to 2 seconds (about 83%)** by optimizing API calls and data-fetching workflows, significantly improving responsiveness and user experience.
- **Resolved a critical production startup crash** in an application caused by a corrupted module by refactoring app initialization, adding safeguards, and implementing pre-deployment tests.
- Implemented **Firebase-based monitoring and remote debugging** for data-processing workflows, enabling real-time status tracking and faster diagnosis and resolution of production issues.
- Designed and implemented a **reusable Android in-app update module**, creating a standard architecture for integration across multiple applications.
- Owned the end-to-end implementation of **ARCore-based functionality** within an existing Android application, integrating and successfully publishing the application to Google Play Store.
- Shipped an enterprise **React Capacitor** mobile application from scratch to production, independently implementing custom native Android plugins to expose native functionality.
- Strengthened Android application security using **encryption and code obfuscation** to protect application logic and user data against reverse engineering and unauthorized extraction.
- Engineered a video pipeline connecting the Android application, Jetson Nano, and Intel RealSense using **socket-based communication and GStreamer** for video capture and processing.
- Implemented a **GPS-based activity logger** to track user movement during data collection, helping validate the accuracy and reliability of generated results.
- Received the **Best Team Performance Award (2024-25)** in recognition of strong collaboration and reliable, impactful project delivery.

Education

2020 - 2024 B.E. Computer Science Engineering at (CGPA: 8.9/10.0)
Madras Institute of Technology, Anna University
